Intel Math K-8 Opportunity

We heard you! Many of you have requested that we provide those “Intel” classes again. Well, here it is – Gila County Education Service Agency, under the direction of Dr. Linda O’Dell, has the opportunity to apply for another Intel Math grant for Kindergarten through 8th grade teachers.

What is it? It is a great professional development opportunity for Gila County teachers that will take place during one week in the summer of 2014 and will be completed throughout the school year 2014-2015. Included in these trainings will be a Math Learning Community experience that assists you with your current math students.

What’s in it for you as a teacher? This professional development opportunity will increase your math content knowledge, boost your use of best math practices, and develop your instructional skills while looking at your own students’ work.

What do I need to do? The first step in the process is to indicate that you are interested in attending. If you are a teacher of students in K-8 and math is one of the subjects you teach, you are a candidate. Although we do not have the specific dates, we need your name to continue the grant process. Please contact Gail Gorry at 928-472-5373 or at ggorry@gilacountyaz.gov with any questions and to indicate your interest. For the grant to be awarded we need at least 35 people to indicate they are interested in this project. Why not gather some colleagues and sign up together to build support within your grade level and school?!

Deadline is fast approaching! Please contact us before January 15 so we can continue the grant process and bring you the training you want.
